Although *Tetragonocalamus angulatus* and *Chimonobambusa angulata* are widely assumed to be synonyms of *C. quadrangularis*, it has been known for some time that they are actually synonyms of *Bambusa breviflora*, itself now considered to be a synonym of *B. tuldooides*.

The inclusion of *Chimonobambusa quadrangularis* in the IUCN Red List is surprising, considering its wide distribution and the rather minor differences from several other species described later in China.
