

厘米，寬約 15 厘米，互生，羽柄長約 2—2.8 厘米；小羽片約 30 對，相距 2—2.3 厘米，互生，具極短的小羽柄或几乎無柄，長約 7—10 厘米，寬 8—12 毫米，狹披針形，向頂端長漸尖，基部稍不等，圓形，有時為淺心脏形，頂生小羽片分離（有小葉柄長約 5 毫米），和下面的小羽片同形，葉緣几為全緣，具有規則的極淺的鈍鋸齒，干時常內捲，但頂端漸尖頭，具三角形鋸齒。葉脈兩面明顯，相距不到 1 毫米，一般為分叉或單脈，近水平開展，頂端稍向上彎，倒行假脈超過孢子囊羣，長達小羽片寬度的 1/2，不透明。葉為草質，下面沿中肋被棕色長鱗片。羽軸光滑，淺褐色，下部直徑約 4 毫米，向上漸變細，到頂部直徑僅為 1 毫米左右，向頂端無翅。孢子囊羣線形，長約 1.5 毫米，彼此分離，距葉緣約 0.8 毫米，大都由 20 個孢子囊組成。

特產于雲南（河口，曼章）。生林下溪沟中，海拔 100—150 米。

9. 透明脈觀音座蓮

Angiopteris henryi Hieron. in *Hedwigia* LXI (1919) 261; C. Chr. Ind. Fil. Suppl. III (1934) 25 —— *A. fauriei* Hieron. var. *formosana* Hieron. l. c. 274.

植株矮小細瘦，高約 1 米。葉二回羽狀；羽片倒闊披針形，上部寬約 10 厘米，向基部變狹，羽軸細瘦，基部粗不過 2.5 毫米，禾稈色；小羽片約 25 對，相距 1.5—1.7 厘米，無柄，基部對生，幾開展，向上略對生，斜向上，基部的長 4.5—6 厘米，中部寬不及 1 厘米，向上漸長，頂部的長達 8 厘米，寬 10—12 毫米，狹披針形，漸尖頭，通直，但有時頂部彎弓，基部圓楔形，邊緣近全緣，有微齒牙。葉脈開展，通直，單一或分叉，兩面明顯，倒行假脈明顯，在光照射下透明，自葉邊到达向中肋的 2/3 处。葉為草質，透明，兩面光滑，干後為黃綠色。孢子囊羣線形，長 1—1.7 毫米，彼此不接近，由 10—18 個孢子囊組成，距葉邊約 0.8 毫米。

產于台灣（Bakenseng 山地）。

10. 广西觀音座蓮

Angiopteris kwangsiensis Ching, sp. nov.

植株高約 2 米。葉為二回羽狀；羽片長圓形，長約 65 厘米，中部寬約 20 厘米，向下部和上部稍變狹，基部和頂部寬約 14 厘米，互生，羽柄長約 15 厘米；小羽片約 16 對，下部的幾對對生，開展，上部的互生，斜向上，具明顯的柄，基部的較短，長 7.5 厘米，其他的幾相等，長 9.2—11 厘米，寬 1.5—1.8 厘米，披針形，向頂端漸尖，基部稍不等，近圓形，頂生小羽片分離，有小葉柄，和下面的小羽片同形；葉緣全緣或具不太明顯的鈍鋸齒，干時稍內捲，向頂部具明顯的鈍鋸齒或三角形鋸齒。葉脈兩面明

显，距离約为 1 毫米，一般为分叉，近水平开展，直行，向頂端稍弯；倒行假脉长过孢子囊羣，約达小羽片寬度的 $1/4$ ，半透明。叶为草質，上面綠色，下面淡綠色，沿中肋疏被棕色鱗片。叶軸光滑，直徑約 1 厘米，干时深褐色，羽軸基部粗約 2.5 毫米，上面具縱沟，光滑，淡黃褐色。孢子囊羣褐色，綫形或長圓形，長約 1.5 毫米，距叶緣約 1 毫米，由 12—16 个孢子囊組成。

特产于广西(罗城)。生深谷密林下，海拔約 400 米。

11. 疏叶观音座蓮(中国植物分类学报,第八卷)

Angiopteris remota Ching et C. H. Wang in *Acta Phytotax. Sinica* VIII (1959) 129, t. 17, f. 7.

植株高大。叶为二回羽状；羽片呈長圓狀闊倒卵形，長約 60 厘米，上部最闊处寬 20—22 厘米，下部漸狹，柄長約 1 厘米，基部略膨大并为深褐色；小羽片 15—16 对，相距 3—4 厘米，下部的几乎展，頂部的稍斜出，披針形，頂部的最大，長 13—15 厘米，中部的最闊，約 2 厘米，下部的小羽片漸縮短，基部一对長仅 2.5—3 厘米，寬 6—8 毫米，先端漸尖，頂部略向上弯，基部近圓形，两侧略不对称，边缘全緣，柄极短，長仅約 1—1.5 毫米，除基部两对几对互生外，余均为互生，頂生小羽片的柄長約 1.5 厘米。叶为厚草質，上面光滑，干后呈暗綠褐色，下面呈浅灰色，中肋附近被浅褐色疏鱗片，羽軸下面浅褐色。叶脉两面均明显，纤細，黑褐色，平展，单一或近基部分叉，各脉相距 0.5—0.7 毫米；倒行假脉长，达到由叶緣向中肋的 $1/2$ 处。孢子囊羣長圓形，長約 1 毫米，有孢子囊 12 个，距叶緣約 0.5 毫米，下部小羽片的長尖头也能育。

产于海南島(白沙县)。生林下。

12. 云南觀音座蓮

Angiopteris yunnanensis Hieron. in *Hedwigia* LXI (1919) 277; C. Chr. Ind. Fil. Suppl. III (1936) 25——*Angiopteris evecta* var. *alata* Christ in *Bull. Herb. Boiss.* VI (1898) 973.

植株高大，高达 2 米。叶柄粗約 2—2.5 厘米，叶片廣闊，二回羽状；羽片互生，長 60 厘米，下部的較短，寬 20—24 厘米，長圓形，基部稍狹，羽柄粗壯，直徑約 2 厘米，羽軸向頂端有翅；小羽片約 20 对(在下部羽片約有 15 对)，几开展，下部的对生，相距 2 厘米，向上部略为互生，相距約 3 厘米，基部的較短，長 8—9 厘米，中部的長 12—13 厘米，寬 2 厘米，漸尖头，基部为圓截形或近圓截形，有短柄，边缘几全緣，向先端有小鋸齒。叶为紙質，干后經常变为褐色或褐綠色，下面光滑或沿中肋下部稍有少數綫状鱗片疏生。叶脉近张开，多数分叉，上下两面明显，尤以下面为甚，倒行假脉纤細，向

Planta ultra 1 m alta, stipite 2 cm crasso, fuscente-brunneo, glabro; lamina ampla, bipinnata; pinnis alternis, 48—60 cm longis, parte superiore 20 cm latis, oblongo-ovobatis, deorsum sensim angustatis, parte basali ca. 8 cm latis; pinnulis ca. 13-jugis, alternis, 2.5—3 cm inter se remotis, obliquis, brevissime petiolulatis, basalibus ca. 6 cm longis, sequentibus sensim majoribus, supremis maximis, ad 16 cm longis, 3 cm latis vel latioribus, lanceolatis, basi subaequaliter cuneato-rotundatis, apicem versus in cuspidem 5—12 mm longam. 3 mm latam subito acuminatis, marginibus ubique regulariter serratis, dentibus deltoideis, obliquis, acutis; venulis subrecte patentibus, plerisque furcatis, intus marginem antrorsim curvatis, in dentes intrantibus, utrinque distinctis, striis recurrentibus obsoletis, vix ultra soros progredientibus; textura folii herbacea, in sicco brunneo-viridi, utraque glabra, ad costas subtus paleis parvis filiformibus, rufis persparisis onusta; soris linearibus, ca. 2 mm longis, non contiguis, a se distantibus, lineas regulares continuas vel saepe interruptas occupantibus, sporangiis 16—22.

Yunnan austr.-orient., Hokou, Yang-ping-pa, leg. Chow Tsang-yi No. 20, V, 1953.

8. *Angiopteris parvipinnula* Ching, sp. nov.

Planta ad 2 vel 3 m alta, stipite incompleto, 3 cm crasso, laete stramineo, glabro; lamina ampla, bipinnata; pinnis oblongis, ad 60 cm longis, ca. 15 cm latis, alternis, petiolo 2—2.8 cm longo, 4—5 mm crasso, stramineo, glabro suffultis; pinnulis ca. 30-jugis, 2—2.3 cm inter se remotis, alternis, brevissime petiolulatis vel sessilibus, 7—10 cm longis, 8—12 mm latis, linear-lanceolatis, acuminatis, basi subaequaliter rotundatis, omnibus similibus, marginibus subintegris vel obscure serrulatis, apice serratis, e sicco leviter revolutis; venulis patentibus, furcatis aut simplicibus, ad marginem parum curvatis, utrinque prominulis, striis recurrentibus ultra soros usque ad medium semifacierum pinnularum progredientibus; textura folii herbacea, statu sicco obscure viridi, supra glabra, infra ad costas paleis rufis filiformibus parce vestita; soris linearibus, ca. 1.5 mm longis, a se magis distantibus, 0.8 mm e margine remotis, sporangiis plerumque 20.

Yunnan austr.-orient., Hokou, Man-Chang, leg. Tsai Ke-hwa No. 513, IV, 24, 1933, in ravine under forest.

10. *Angiopteris kwangsiensis* Ching, sp. nov.

Planta ad 2 m alta, stipite incompleto, parte superiore ca. 1.5 cm crasso, brunnescente nigricante, glabro; lamina ampla, bipinnata; pinnis alternis, obliquis, oblongis, ca. 65 cm longis, 17 cm medio latis, basi parum angustatis, petiolo ad 15 cm longo, 3.5 mm crasso, brunnescente stramineo, glabro suffultis; pinnulis ca. 16-jugis, 3 cm inter se remotis, breviter petiolulatis, inferioribus parum abbreviatis, patentibus, oppositis, sequentibus suboppositis, parum majoribus, mediis 9—11 cm longis, 1.5—1.8 cm basi latis, lanceolatis, apice acuminatis, rectis vel paulo curvatis, basi latiore subrotundatis, terminali aequali, marginibus integris vel inconspicue serrulatis, apex serratis; venulis patentibus, furcatis, parte superiore intra marginem leviter curvatis, quam mesophyllo obscurioribus, striis recurrentibus subpellucidis, ultra soros progredientibus; textura folii herbacea, supra obscure et infra pallide viridi, utraque glabra; soris linearibus, 1.5 mm longis, contiguis, 1 mm e margine remotis, sporangiis 10—16.

Kwangsi: Mung Tung Kou, 24 km. north of Luchen, leg. R. C. Ching 5501, under

forest in ravine, alt. 400 m, V, 28, 1928.

13. *Angiopteris robusta* Ching, sp. nov.

Planta ad 2 m vel ultra alta, stipite ultra 3 cm crasso, fusco-brunneo, glabro; lamina ampla, bipinnata; pinnis oblongis, ultra 60 cm longis, 20 cm medio latis, obliquis, alternis, petiolo 4.5 cm longo, supra geniculum 5 mm crasso, robusto, fusco-stramineo, glabro, non marginato suffultis, rachillis ad apicem non alatis; pinnulis 14-18-jugis, alternis, 3 cm inter se remotis, basalibus ca. 8.5 cm longis, 2.5 cm latis, acuminatis, basi rotundatis, breviter petiolulatis, patentibus, sequentibus majoribus, supremis 13-15 cm longis, 2.2-2.6 cm latis, gradatim acuminatis (pinna terminali aequali), margine integris, cartilagineo-incrassatis, in sicco leviter revolutis, apice minute et remote serrulatis; venulis subpatentibus, plerisque furcatis, infra prominulis, supra notatis, ad marginem parum curvatis, apice incrassatis, striis recurrentibus distinctis vix ultra soros progredientibus; textura folii crasso-chartacea, supra atro-viridi, infra pallidore, ad costas paleis parvis, rufis filiformibus, adpressis sparse vestita; soris linearibus, 2-3 mm longis, contiguis, e basi usque ad apicem pinnularum extensis, ca. 1.5 mm e margine remotis, sporangiis 22-30.

Kwangsi occid., Pe-seh, Tang-li-shiang, Red River basin, Kwangsi Vegetation Survey No. 3481, IX, 8, 1953, under dense forest. Unfolding leaves used as a vegetable.

14. *Angiopteris officinalis* Ching, sp. nov.

Planta parva, ad 80 cm alta, stipite ca. 30-40 cm longo, basi 6 mm crasso, pallide stramineo, nudo; lamina 30-40 cm longa et lata, bipinnata; pinnis (praeter terminalem) 2-jugis, alternis, 4 cm inter se separatis, breviter petiolatis (petiolo 1-2 cm longo), ascendentibus, oblanceolatis, 20-40 cm longis, ca. 12 cm supra medium latis, deorsum gradatim decrescentibus, basi 4-6 cm latis, pinnatis; rachillis tenuibus, 1.5-2 mm crassis, stramineis, glabris, marginatis, ad apicem alatis; pinnulis 14-20-jugis, alternis, sessilibus, 1.8 cm a se remotis, basalibus valde reductis, ca. 2 cm longis, 6 mm latis, acuminatis, patentibus, sequentibus sensim majoribus, mediis 4-5 cm longis, 1 cm latis, oblongo-lanceolatis, parum obliquis, apice subcaudatis et leviter falcato-incurvatis, basi subrotundatis, supremis et terminali maximis, 9 cm longis, 1.3 cm medio latis, lanceolatis, gradatim acuminatis, basin versus leviter vel vix angustatis, obliquo-rotundatis, rectis, obliquis, marginibus ubique crenato-serratis; venulis patentibus, furcatis aut simplicibus, laxis, apicem versus leviter incurvatis, utrinque praesertim subtus prominentibus, striis recurrentibus usque ad medium semifacierum pinnularum progredientibus; textura folii tenuiter herbacea, supra obscure et infra brunnescente viridi, utraque glaberima; soris parvis, ellipticis 1 mm longis, a se magis separatis, e margine plano sterilique magis remotis, sporangiis 6-10.

Chekiang, Pin-yang Hsien, Yi-tang Shan, leg. K. K. Tsoong No. 1882.

17. *Angiopteris rahaoensis* Ching, sp. nov.

Stipite ; lamina ampla, bipinnata, rachide fuscente brunnea, 5 mm crassa, glabra; pinnis alternis, angulo antico ca. 85° a rachide patentibus, oblongis, 50 cm vel ultra longis, 20 cm medio latis, basin versus parum angustatis, petiolo 1.5 cm longo, incrassato, fusco-brunneo suffultis; rachillis gracilibus, ca. 2 mm crassis, stramineis, ad apicem anguste alatis, pinnulis praeter terminalem 21-jugis, alternis, patentibus, 2 cm inter se remotis, basalibus parum abbreviatis, ceteris fere aequalibus, mediis 10-11 cm longis, 1.5 basi latis, ad medium
